INTRODUCTION:

BBC is a decentralized Cryptocurrency deployed on the Ethereum Network.

Cryptocurrencies deployed on the Ethereum Network are referred to as “ERC20 Compliant” or “Tokens” and are open source for everyone to see.

The release of the token is based on Ethereum platform and meets all modern standards. Based on this platform, our token will be available for sale on various stock exchanges, crypto-currency. It is easy to integrate into third-party services, thanks to the new standard.

We decided to deploy on the Ethereum Network to boost user confidence that the BBC network cannot ever be controlled by one entity or admin and deploying as an ERC20 token allows us to utilize third party wallets and block-explorers for full transparency and decentralization.

INCEPTION:

We, the development team, consist of Cryptocurrency developers, computer technicians, website developers, graphics designers, investors and traders from around the globe.

We created BBC because of the problems that arose in many networks, such as the broken wallet network that stopped users from being able to use/send their Cryptocurrency and the admin's lack of care and knowledge to repair the issues.

With the ongoing problems, and the admin's inability to fix the issues, despite our offers of help, in 2018 we decided that enough was enough, and we formed a small group of developers who know each other well and who were all investors in the BBC. We formed the BBC developers group.

We knew from the start that we wanted to give the existing BBC community a Decentralized 'version' of BBC as we value the original ethos of a global Community-driven coin. Developing BBC allows the BBC community to stay intact and continue to use a familiar Cryptocurrency but in a decentralized, Non-controlled manner, with a real market value, not an unrealistic "valuation" system.

We deployed the new Ethereum Contract to create BBC in March 2019 and started to develop our logos website.

 Total Supply	41 Billion
 Open Source	✓
 Third Party Wallets	✓
 Third Party Miners	✓
 Third Party Block Explorers	✓
 Can it be listed on a public exchange?	✓
 Wallet Access Fee	✗
 Can Admin Disable Your Wallets?	✗

BBC TOKEN SPECIFICATIONS:

ERC20 Compliant Ethereum Token deployed on the Ethereum Network

Name: Bigbull

Coin Ticker: BBC

Coin Supply: 410,000,000

Contract Access: `0x91B4eD71Efa895fCD15Cd17A5D6156317078F815`

Deployed on the Ethereum Network, network fees vary depending on the Ethereum Miners and how busy the network is but usually the network fees are under 0.003 Ethereum.

ERC20 tokens employ an open source code that anyone can view.

The network is run by the Ethereum Miners, one of the largest mining networks in the world.

The wallets and block explorers used are third party owned and open source, and therefore no fees can be charged by us for wallets and everything is transparent.

WALLETS:

You can use a range of wallets for BBC but you must use an ERC20 Compatible wallet. We recommend using MyEtherWallet (www.myetherwallet.com) or IMToken app on Android or IOS as these are user friendly and light-weight (i.e. do not require you to install and sync with the Ethereum network which is large and can take a long time).

Other wallets that can be used are listed below – An up to date list of compatible wallets can be found on our website.

MetaMask (Firefox and Chrome browser add-on) - <https://metamask.io>

Mist (Desktop) - <https://github.com/ethereum/mist/releases>

Parity (Desktop) - <https://parity.io/parity.html>

WARNING – Do not use an Ethereum Address from a non-ERC20 compatible wallet. If you use a non-ERC20 compatible wallet your coins could be lost irreversibly and we cannot assist with recovery.

If you have an Ethereum Wallet, that you control the PRIVATE KEYS for then it is most likely compatible or at the very least you could import your Private Keys into a new compatible wallet. Again, we cannot offer support for this.

BLOCK EXPLORERS:

BBC utilizes third party block explorers, this allows for full transparency.

You can find BBC on:

Etherscan:

<https://etherscan.io/address/0x91b4ed71efa895fcd15cd17a5d6156317078f815>

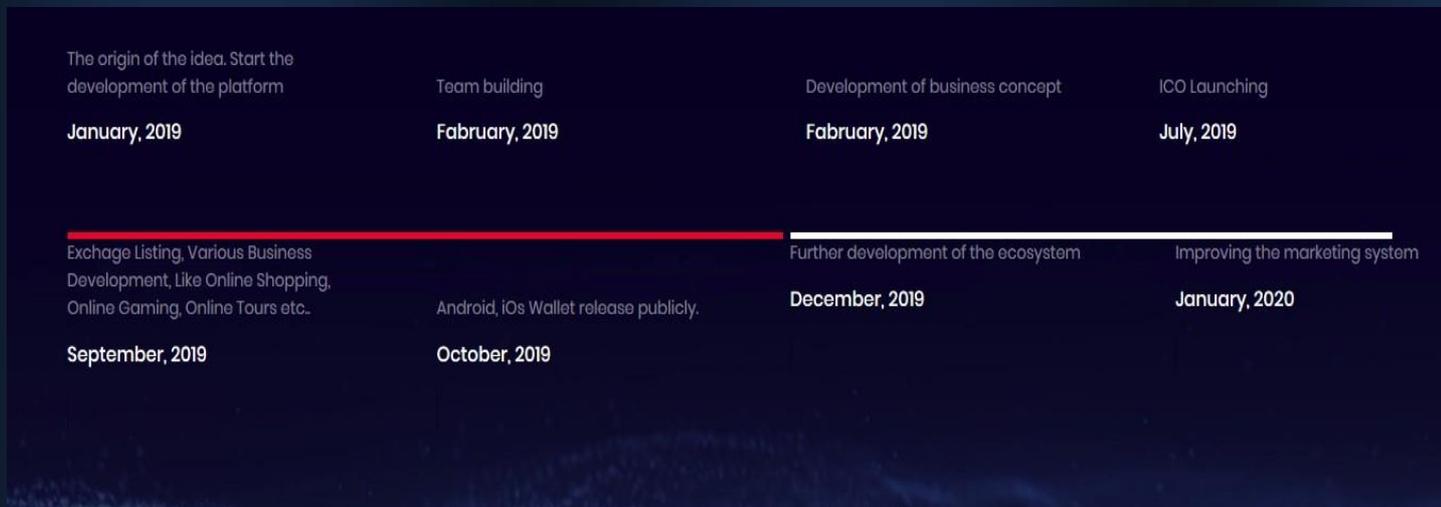

Ethplorer:

<https://ethplorer.io/address/0x91b4ed71efa895fcd15cd17a5d6156317078f815>

ROADMAP:

You can see from the Roadmap Graphic above what our immediate plans for BBC are. We have already created the token and we are now in the Exchange Listing phase.

Exchange Listing:

We will be listed on a public exchange. We have already discussed with several exchanges to be listed after distribution is complete.

CoinmarketCap Listing:

In order to be listed on CoinmarketCap you must first be listed on a public trading exchange and meet some parameters such as 24h trading volume. Following exchange listing as above we will submit our request to CoinmarketCap and we will do everything in our power to ensure we are listed on CoinmarketCap.

Payment System Inclusion:

After being listed on a Public Trading Exchange and CoinmarketCap we will submit our requests to payment processors in order to have BBC added as an option to make payment anywhere that Bitcoin is accepted. This could then further lead to platforms such as Shapeshift and further lead to debit card system inclusions.

In recent months we have seen many natural disasters, such as earthquakes and hurricanes and although people are out in force to help the people affected, more money is always needed to help aid these communities and people.

After Token listing phase we will develop various public businesses like online shopping, online gaming, online tour packages etc.

It is our intention that when BBC distribution phase has ended and the token is publicly listed on exchanges and all our businesses publically available than we will run further sales campaigns to sell some of these tokens. ALL funds rose from this supply going towards our charity account where donations will be made accordingly.

STAYING UP TO DATE:

The best way to stay up to date with current BBC affairs after this white paper is through our website at www.bigbull.com

The [news section](#) on the main website is where all news will be released first, followed by our Facebook and Twitter social media accounts (links on the main website).

CLOSING STATEMENT:

BBC is a legitimate Cryptocurrency deployed on the Ethereum Blockchain.

BBC is transparent and open source.

BBC can be listed on public exchanges.

We, the developers, can never charge you a fee to access your wallet.

We can never lock your wallet, or stop you using your BBC.

Everything about BBC is open and transparent; you can find all the information you need in this white paper and on the website.
